

Data Center Deal Comparables

Selected U.S. benchmarks for host-community negotiations

Deal	MW basis	Taxes / PILOT	Community value and timing	Power and infrastructure	Water	Neighbor protections	Transparency
DeForest, WI — QTS (negotiated terms; project collapsed)	Not publicly disclosed (\$12B campus, up to 1,600 acres)	Contractual minimum taxable-value floor	\$50M community fund (education, housing, workforce)	Developer pays 100% of project grid infrastructure; 750 MW new renewables	Private-well guarantees, quarter-mile setback	Buyout at 110% of assessed value for materially affected homes	Secret process; deal died when terms surfaced
West Feliciana Parish, LA — Hut 8 (executed agreement)	330 MW contracted utility demand	PILOT/lease structure via parish Industrial Development Board (not full taxation); developer-donated property leased back	~\$90M/yr projected PILOT revenue (about \$273,000 per MW of contracted utility demand per year); property-tax credits to households authorized by state law	Developer-funded substation and generation; ratepayer protections	Closed-loop recycling, no aquifer impact; \$16M wells and mains deeded to public	No standalone terms publicly documented	No NDA; parish publicly pitches the deal as the model
STAMP campus, Genesee County, NY — Stream (proposal stage)	500 MW reported demand	Requested exemptions per GCEDC's March 2026 cost-benefit analysis (Stream US Data Centers LLC): about \$1.43B in sales-tax exemptions (roughly \$716M local plus roughly \$716M state) and about \$31.2M in mortgage-tax exemptions (roughly \$15.6M local plus roughly \$15.6M state); \$285M PILOT over 30 years. (Stream says the sales-tax request is a failsafe if the state internet-data-center exemption does not apply.)	~\$9.5M/yr PILOT and host payments over 30 years (about \$19,000/MW/yr); ~125 permanent jobs	Not publicly detailed	Not publicly detailed	Not publicly detailed	The cautionary case for negotiating late

New York State Host Community Investment Framework (voluntary guidance, Sept 2026)	Per MW of utility demand	Recommends at least \$1M in community investment per MW	Benchmark, not a payment; flexible upfront-or-lifetime investment target negotiated locally (not necessarily cash to the host community)	Guidance only; terms set locally	—	—	—
